

Did you know that MIACALCIN Nasal Spray is an easy-to-use type of medicine that accommodates active lifestyles? Did you also know there are several benefits to using a nasal spray to treat postmenopausal osteoporosis?

The active ingredient is calcitonin, a man-made protein similar to the one found in people, other mammals, and some types of fish and birds.

Miacalcin (calcitonin-salmon) Nasal Spray is Safe, Convenient, and Well-tolerated by many patients.

Important Safety Information:

Prescription MIACALCIN is approved for the treatment of postmenopausal osteoporosis.

As with any medication, some side effects can occur when using MIACALCIN Nasal Spray. Side effects may include: nasal symptoms (runny nose, crusting, nosebleed, etc), back and/or joint pain, and headache. These side effects tend to be mild and disappear quickly; however, in some cases, the doctor or healthcare provider may recommend temporarily discontinuing the medication until symptoms stop.

If people experience side effects after using MIACALCIN Nasal Spray, they should contact their doctor or healthcare provider. Also, because calcitonin-salmon is a protein, the potential for a systemic allergic reaction exists. People who are allergic to calcitonin-salmon should not use this medication.
